

**APPENDIX**  
**Page 1 of 1**

In reference to the amendments made herein to the claims, additions appear as underlined text while deletions appear as strikeout text, as indicated below:

In the Claims:

Please amend claim 1 as follows:

1. (Thrice Amended) A chimeric molecule suitable for stimulating a tumor specific immune response comprising:

a complete ~~an~~ antibody having heavy and light chains each with an N terminus and being capable of specifically binding to a tumor cell associated antigen, and

a chemokine, which is coupled to the N terminus of the heavy or light chain of the antibody such that the antibody remains capable of binding to the tumor cell associated antigen and the chemokine retains activity.
